This graph is *triangle saturated*

## Goal:

Avoid a forbidden subgraph, but add as many edges as possible.

## Example:

Let the triangle be forbidden.

## Definition

A graph  $G$  is  $H$ -saturated if:

## Goal:

Avoid a forbidden subgraph, but add as many edges as possible.

## Example:

Let the triangle be forbidden.

## Definition

A graph  $G$  is  $H$ -saturated if:

- 1  $H$  is not a subgraph of  $G$

## Goal:

Avoid a forbidden subgraph, but add as many edges as possible.

## Example:

Let the triangle be forbidden.

## Definition

A graph  $G$  is  $H$ -saturated if:

- 1  $H$  is not a subgraph of  $G$  and
- 2 If we add any edge to  $G$ ,  $H$  is a subgraph of the resulting graph.

# Saturation Number

# Saturation Number

## Definition: (Erdős-Hajnal-Moon)

The *saturation number* of a graph  $H$  and a number  $n$  is the minimum number of edges in a graph on  $n$  vertices that is  $H$  saturated.

$$\text{sat}(n; H) := \min\{\|G\| : |G| = n \text{ and } G \text{ is } H \text{ saturated}\}$$

# Saturation Number

7 edges

Definition: (Erdős-Hajnal-Moon)

The *saturation number* of a graph  $H$  and a number  $n$  is the minimum number of edges in a graph on  $n$  vertices that is  $H$  saturated.

$$\text{sat}(n; H) := \min\{\|G\| : |G| = n \text{ and } G \text{ is } H \text{ saturated}\}$$

# Saturation Number

7 edges

# Edge Coloring

## Definition:

An *edge coloring* of a graph is an assignment of a color to each edge.

# Edge Coloring

## Definition:

An *edge coloring* of a graph is an assignment of a color to each edge.

# Edge Coloring

## Definition:

An *edge coloring* of a graph is an assignment of a color to each edge.

Colors: red, blue.

# Edge Coloring

## Definition:

An *edge coloring* of a graph is an assignment of a color to each edge.

Colors: red, blue.

# Edge Coloring

## Definition:

An *edge coloring* of a graph is an assignment of a color to each edge.

Colors: red, blue.

# Edge Coloring

## Definition:

An *edge coloring* of a graph is an assignment of a color to each edge.

## Definition:

A graph is *monochromatic* if all its edges are assigned the same color.

# Ramsey Problems

Goal:

An edge-coloring with no forbidden monochromatic subgraph.

# Ramsey Problems

## Goal:

An edge-coloring with no forbidden monochromatic subgraph.

## Example:

Color **red** and **blue**; forbid **red triangle** and **blue triangle**.

# Ramsey Problems

Goal:

An edge-coloring with no forbidden monochromatic subgraph.

Example:

Color **red** and **blue**; forbid **red triangle** and **blue triangle**.

# Ramsey Problems

Goal:

An edge-coloring with no forbidden monochromatic subgraph.

Example:

Color red and blue; forbid red triangle and blue triangle.

good coloring

# Ramsey Problems

Goal:

An edge-coloring with no forbidden monochromatic subgraph.

Example:

Color **red** and **blue**; forbid **red triangle** and **blue triangle**.

good coloring

bad coloring

# Ramsey Problems

Goal:

An edge-coloring with no forbidden monochromatic subgraph.

Example:

Color red and blue; forbid red triangle and blue triangle.

good coloring

bad coloring

bad coloring

# Ramsey Problems

Note:

Sometimes a good coloring doesn't exist!

# Ramsey Problems

## Note:

Sometimes a good coloring doesn't exist!

Example: Any red-blue coloring of the edges of  $K_6$  contains a monochromatic red triangle or a monochromatic blue triangle.

# Ramsey Problems

## Note:

Sometimes a good coloring doesn't exist!

Example: Any red-blue coloring of the edges of  $K_6$  contains a monochromatic red triangle or a monochromatic blue triangle.

# Ramsey Problems

Example: Any red-blue coloring of the edges of  $K_6$  contains a monochromatic red triangle or a monochromatic blue triangle.

no good coloring exists

# Ramsey Problems

## Note:

Sometimes a good coloring doesn't exist!

## Ramsey's Theorem

Given **any** collection of forbidden subgraphs, and **any** sufficiently large clique, no good coloring exists.

The lowest “sufficiently large” number for a given collection of subgraphs is called the Ramsey Number.

# Ramsey Problems

## Note:

Sometimes a good coloring doesn't exist!

## Ramsey's Theorem

Given **any** collection of forbidden subgraphs, and **any** sufficiently large clique, no good coloring exists.

The lowest “sufficiently large” number for a given collection of subgraphs is called the Ramsey Number.

- $R(3, 3) = 6$  (two triangles)

# Ramsey Problems

## Note:

Sometimes a good coloring doesn't exist!

## Ramsey's Theorem

Given **any** collection of forbidden subgraphs, and **any** sufficiently large clique, no good coloring exists.

The lowest “sufficiently large” number for a given collection of subgraphs is called the Ramsey Number.

- $R(3, 3) = 6$  (two triangles)
- $R(4, 4) = 18$

# Ramsey Problems

## Note:

Sometimes a good coloring doesn't exist!

## Ramsey's Theorem

Given **any** collection of forbidden subgraphs, and **any** sufficiently large clique, no good coloring exists.

The lowest “sufficiently large” number for a given collection of subgraphs is called the Ramsey Number.

- $R(3, 3) = 6$  (two triangles)
- $R(4, 4) = 18$
- $43 \leq R(5, 5) \leq 49$

# Ramsey Problems

## Note:

Sometimes a good coloring doesn't exist!

## Ramsey's Theorem

Given **any** collection of forbidden subgraphs, and **any** sufficiently large clique, no good coloring exists.

**Erdős-Szekeres:** Given  $N$ , any sufficiently large collection of points in general position contains a subset forming the vertices of a convex  $N$ -gon

**Van der Waerden:** Any coloring of the natural numbers contains arbitrarily long monochromatic arithmetic sequences.

**Green-Tao:** The sequence of prime numbers contains arbitrarily long arithmetic progressions.

- 1 Introduction to Graphs
- 2 Graph Saturation
- 3 Ramsey Theory
- 4 Colored Graph Saturation**

# Marrying The Two

Recall:

A graph  $G$  is  $H$ -saturated if  $G$  contains no  $H$  subgraph, but adding any edge to  $G$  creates an  $H$  subgraph.

# Marrying The Two

Recall:

A graph  $G$  is  $H$ -saturated if  $G$  contains no  $H$  subgraph, but adding any edge to  $G$  creates an  $H$  subgraph.

Ramsey version of saturation:

Given forbidden graphs  $H_1, \dots, H_k$  (in colors  $1, \dots, k$  respectively), we say a graph  $G$  is  $(H_1, \dots, H_k)$ -saturated if a good edge-coloring of  $G$  exists (using colors  $1, \dots, k$ ), but if we add *any* edge to  $G$ , all colorings are bad.

# Marrying The Two

Example: the graph below is  $\left( \begin{array}{c} \text{---} \\ \text{---} \end{array} \right)$ -saturated.

# Marrying The Two

Example: the graph below is  $\left( \begin{array}{c} \text{---} \\ \text{---} \end{array} \right)$ -saturated.

First: show a good coloring exists.

# Marrying The Two

Example: the graph below is  $\left( \begin{array}{c} \text{---} \\ \text{---} \end{array} \right)$ -saturated.

First: show a good coloring exists.

# Marrying The Two

Example: the graph below is  $\left( \begin{array}{c} \text{---} \\ \text{---} \end{array} \right)$ -saturated.

First: show a good coloring exists.

Second: show *no* good coloring exists if we add *any* edge.

# Marrying The Two

Example: the graph below is  $\left( \begin{array}{c} \text{---} \\ \text{---} \end{array} \right)$ -saturated.

First: show a good coloring exists.

Second: show *no* good coloring exists if we add *any* edge.

# Marrying The Two

Example: the graph below is  $\left( \begin{array}{c} \text{---} \\ \text{---} \end{array} \right)$ -saturated.

First: show a good coloring exists.

Second: show *no* good coloring exists if we add *any* edge.

# Marrying The Two

Example: the graph below is  $\left( \begin{array}{c} \text{---} \\ \text{---} \end{array} \right)$ -saturated.

First: show a good coloring exists.

Second: show *no* good coloring exists if we add *any* edge.

# Marrying The Two

Example: the graph below is  $\left( \begin{array}{c} \text{---} \\ \text{---} \end{array} \right)$ -saturated.

First: show a good coloring exists.

Second: show *no* good coloring exists if we add *any* edge.

# Marrying The Two

Example: the graph below is  $\left( \begin{array}{c} \text{---} \\ \text{---} \end{array} \right)$ -saturated.

First: show a good coloring exists.

Second: show *no* good coloring exists if we add *any* edge.

# Marrying The Two

Example: the graph below is  $\left( \begin{array}{c} \text{---} \\ \text{---} \end{array} \right)$ -saturated.

First: show a good coloring exists.

Second: show *no* good coloring exists if we add *any* edge.

# Marrying The Two

Example: the graph below is  $\left( \begin{array}{c} \text{---} \\ \text{---} \end{array} \right)$ -saturated.

First: show a good coloring exists.

Second: show *no* good coloring exists if we add *any* edge.

# Marrying The Two

Example: the graph below is  $\left( \begin{array}{c} \text{---} \\ \text{---} \end{array} \right)$ -saturated.

First: show a good coloring exists.

Second: show *no* good coloring exists if we add *any* edge.

# Marrying The Two

Example: the graph below is  $\left( \begin{array}{c} \text{---} \\ \text{---} \end{array} \right)$ -saturated.

First: show a good coloring exists.

Second: show *no* good coloring exists if we add *any* edge.

# Marrying The Two

Example: the graph below is  $\left( \begin{array}{c} \text{---} \\ \text{---} \end{array} \right)$ -saturated.

First: show a good coloring exists.

Second: show *no* good coloring exists if we add *any* edge.

# Marrying The Two

Example: the graph below is  $\left( \begin{array}{c} \text{---} \\ \text{---} \end{array} \right)$ -saturated.

First: show a good coloring exists.

Second: show *no* good coloring exists if we add *any* edge.

$rsat(n; H_1, \dots, H_k)$

Again, we are interested in  $(H_1, \dots, H_k)$ -saturated graphs with as few edges as possible.

Definition:

For a number  $n$  and forbidden subgraphs  $H_1, \dots, H_k$ , we define

$$rsat(n; H_1, \dots, H_k)$$

to be the minimum number of edges over all  $n$ -vertex graphs that are  $(H_1, \dots, H_k)$ -saturated.

$rsat(n; H_1, \dots, H_k)$

Again, we are interested in  $(H_1, \dots, H_k)$ -saturated graphs with as few edges as possible.

Definition:

For a number  $n$  and forbidden subgraphs  $H_1, \dots, H_k$ , we define

$$rsat(n; H_1, \dots, H_k)$$

to be the minimum number of edges over all  $n$ -vertex graphs that are  $(H_1, \dots, H_k)$ -saturated.

Previous Example:

$rsat(n; H_1, \dots, H_k)$

Again, we are interested in  $(H_1, \dots, H_k)$ -saturated graphs with as few edges as possible.

Definition:

For a number  $n$  and forbidden subgraphs  $H_1, \dots, H_k$ , we define

$$rsat(n; H_1, \dots, H_k)$$

to be the minimum number of edges over all  $n$ -vertex graphs that are  $(H_1, \dots, H_k)$ -saturated.

Previous Example:

is  $\left( \begin{array}{c} \text{red path of length 2} \\ \text{blue path of length 2} \end{array} \right)$ -saturated, so  $rsat \left( 5; \begin{array}{c} \text{red path of length 2} \\ \text{blue path of length 2} \end{array} \right) \leq 6$ .

# Forbidding Cliques: Ramsey Numbers

## Definition:

Let  $R = R(c_1, \dots, c_t)$  be the smallest natural number so that, for forbidden cliques  $K_{c_1}, \dots, K_{c_t}$ , no good coloring of  $K_R$  exists.

# Forbidding Cliques: Ramsey Numbers

## Definition:

Let  $R = R(c_1, \dots, c_t)$  be the smallest natural number so that, for forbidden cliques  $K_{c_1}, \dots, K_{c_t}$ , no good coloring of  $K_R$  exists.

Example:  $R(3, 3) = 6$

# Forbidding Cliques: Ramsey Numbers

## Definition:

Let  $R = R(c_1, \dots, c_t)$  be the smallest natural number so that, for forbidden cliques  $K_{c_1}, \dots, K_{c_t}$ , no good coloring of  $K_R$  exists.

Example:  $R(3, 3) = 6$

*no good coloring of  $K_6$  exists*

# Forbidding Cliques: Ramsey Numbers

## Definition:

Let  $R = R(c_1, \dots, c_t)$  be the smallest natural number so that, for forbidden cliques  $K_{c_1}, \dots, K_{c_t}$ , no good coloring of  $K_R$  exists.

Example:  $R(3, 3) = 6$

*no good coloring of  $K_6$  exists*

*a good coloring of  $K_5$  exists*

## Forbidding Cliques: Hanson-Toft

Let  $R = R(c_1, \dots, c_t)$ . The construction below is  $(K_{c_1}, \dots, K_{c_t})$ -saturated.

# Forbidding Cliques: Hanson-Toft

Let  $R = R(c_1, \dots, c_t)$ . The construction below is  $(K_{c_1}, \dots, K_{c_t})$ -saturated.

# Forbidding Cliques: Hanson-Toft

Let  $R = R(c_1, \dots, c_t)$ . The construction below is  $(K_{c_1}, \dots, K_{c_t})$ -saturated.

- A good coloring exists

# Forbidding Cliques: Hanson-Toft

Let  $R = R(c_1, \dots, c_t)$ . The construction below is  $(K_{c_1}, \dots, K_{c_t})$ -saturated.

- A good coloring exists

# Forbidding Cliques: Hanson-Toft

Let  $R = R(c_1, \dots, c_t)$ . The construction below is  $(K_{c_1}, \dots, K_{c_t})$ -saturated.

- A good coloring exists

# Forbidding Cliques: Hanson-Toft

Let  $R = R(c_1, \dots, c_t)$ . The construction below is  $(K_{c_1}, \dots, K_{c_t})$ -saturated.

- A good coloring exists

# Forbidding Cliques: Hanson-Toft

Let  $R = R(c_1, \dots, c_t)$ . The construction below is  $(K_{c_1}, \dots, K_{c_t})$ -saturated.

- A good coloring exists
- If we add any edge, NO good coloring exists

# Forbidding Cliques: Hanson-Toft

Let  $R = R(c_1, \dots, c_t)$ . The construction below is  $(K_{c_1}, \dots, K_{c_t})$ -saturated.

- A good coloring exists
- If we add any edge, NO good coloring exists

# Forbidding Cliques: Hanson-Toft

Let  $R = R(c_1, \dots, c_t)$ . The construction below is  $(K_{c_1}, \dots, K_{c_t})$ -saturated.

- A good coloring exists
- If we add any edge, NO good coloring exists

# Forbidding Cliques: Hanson-Toft

Let  $R = R(c_1, \dots, c_t)$ . The construction below is  $(K_{c_1}, \dots, K_{c_t})$ -saturated.

## Hanson-Toft

Conjecture: The construction above has the fewest possible edges.

## Hanson-Toft Conjecture

$$\text{sat}(n; \mathcal{R}_{\min}(K_{k_1}, \dots, K_{k_t})) = \begin{cases} \binom{n}{2} & n < r \\ \binom{r-2}{2} + (r-2)(n-r+2) & n \geq r \end{cases}$$

## Hanson-Toft Conjecture

$$\text{sat}(n; \mathcal{R}_{\min}(K_{k_1}, \dots, K_{k_t})) = \begin{cases} \binom{n}{2} & n < r \\ \binom{r-2}{2} + (r-2)(n-r+2) & n \geq r \end{cases}$$

Chen, Ferrara, Gould, Magnant, Schmitt; 2011

$$\text{sat}(n; \mathcal{R}_{\min}(K_3, K_3)) = \begin{cases} \binom{n}{2} & n < 6 = r \\ 4n - 10 & n \geq 56 \end{cases}$$

## Hanson-Toft Conjecture

$$\text{sat}(n; \mathcal{R}_{\min}(K_{k_1}, \dots, K_{k_t})) = \begin{cases} \binom{n}{2} & n < r \\ \binom{r-2}{2} + (r-2)(n-r+2) & n \geq r \end{cases}$$

Chen, Ferrara, Gould, Magnant, Schmitt; 2011

$$\text{sat}(n; \mathcal{R}_{\min}(K_3, K_3)) = \begin{cases} \binom{n}{2} & n < 6 = r \\ 4n - 10 & n \geq 56 \end{cases}$$
